

**Amendments to the Specification**

Please replace the paragraph at page 5, lines 18 through 21, with the following amended paragraph:

Figure 2 shows the levels of oxidative burst of human neutrophils from Kostmann patients (A=□, M=○), one patient with cyclic neutropenia (●) and a healthy donor (■). The assay records Fc dependant internalisation of a covalent complex of rabbit polyclonal anti-BSA and BSA with a fluorescence probe. The dotted line represents background fluorescence.
